Actor:	Student
Description:	User searches for the specific materials in this portal
Preconditions:	To Search: User has to register/login first, provide the correct college ID and then provide the name of the book as per his requirement
Postconditions:	System directs the user to the space where the desired book is located in the storage
Priority:	The user needs to login to his account or if an account doesn't exist then the actor has to create it first and then login, and then enter the correct college ID
Frequency of Use:	Everytime the user needs to look up for a book he will use this option
Trigger:	User clicks on the Search bar option to search for the desired book
Flow of Events:	**System**: Asks for Login/Registration credentials *User:* Clicks Login/Register **System**: Asks for the college ID *User*: Enter the correct college ID **System**: Leads to the page for searching the required books *User*: Writes the name of the book on the search bar
Alternative Flows:	NA
Exceptions:	User enters a book name beyond the scope of the storage(academis)
Includes:	NA
Special Requirements:	Proper name of the book
Assumptions:	User is a person and not a robot
Notes and Issues:	NA
